DESIRED POSITION:

Team Lead / Lead Mobile Software Engineer (Flutter, iOS)

SUMMARY:

Engineering Team Lead / Senior Mobile Engineer with 13+ years of experience in mobile software development and deep expertise in Flutter and iOS. Experienced in leading engineering teams, mentoring developers, driving architectural decisions, and establishing development best practices. Proven ability to deliver complex mobile products, improve engineering processes, and collaborate closely with product managers, designers, QA, and business stakeholders.

TECHNICAL SKILLS:

Languages: Dart, Swift, Objective-C, C++, Kotlin

Technologies & knowledge:

- **IOS:** RxSwift, Combine, UIKit, SwiftUI, CoreAnimation, CoreLocation, Camera, AFNetworking, Alamofire, Promise Kit, Vision, Push Notifications, Google Maps, CoreData, XCTest/UITest, Quick/Nimble, Swift Package Manager / CocoaPods
- **Android:** RxJava, Retrofit, Material design
- **Flutter:** BLoC, Provider, Riverpod, GetIt, Dio, GraphQL, GoRouter, AutoRoute, Freezed, Mocktail, BlocTest, WidgetTest, Golden tests, Monorepo, Melos, Onepub, Widgetbook, Kochava, Pigeon, Workspace
- **DB frameworks:** SQLite, Realm
- **Server API:** REST, GraphQL, gRPC, WebSockets, LightStreamer
- **Firebase services:** Firestore, CloudMessaging, Crashlytics, RemoteConfig, Authentication, AppDistribution, DynamicLinks, CloudFunctions
- **Amazon services:** AWS Amplify, AWS AppConfig
- **CI/CD:** GitHub, CircleCI with Fastlane scripts
- **Analytics:** Braze sdk, Amplitude sdk, Datadog
- **AI:** Cursor (Skills, Rules, Commands, MCP, Sub Agents), Codex
- **Others:** WebRTC, Google Maps, OpenGL ES 2.0, OAuth 2.0, Plaid sdk, Kochava sdk, AppsFlyer,

Application architectures:

- **IOS:** MVVM+Coordinator, VIPER, Redux, Mobius
- **Flutter:** BloC/Cubit, Riverpod, Redux

Management Tools: JIRA, MS TFS, Trello, Notion

Version System Control: GIT, SVN

AI tools: Cursor, Codex

IDE: XCode, Android Studio, IntelliJ IDEA, Visual Studio, VSCode

WORK EXPERIENCE:

Redcore (Warsaw, Poland)

Lead Software Engineer

01.2026 - Present

Project:	Zazino (Gambling/iGaming domain)
Project description:	Mobile application that offers a comprehensive experience from sports betting to live casino players and mobile gambling fans.
Position:	Lead Software Developer
Responsibilities and achievements:	• Developed a Flutter-based VPN module and integrated it into existing native iOS and Android applications. • Led the development of the MVP version of the product from scratch. • Created project documentation (features, epics, and test cases) from the existing codebase using AI agents and organized it in NotebookLM, improving knowledge sharing for developers and project managers. • Established a reusable multi-module architecture based on Flutter Workspaces. • Developed core application modules, including Network and Analytics and core UI components • Designed and implemented a white-label architecture for creating independent branded applications. • Built a reusable Design System to speed up customization and development of white-label applications. • Configured AI development workflows, including project rules, skills, documentation, and MVP guidelines. • Implemented CI/CD pipelines (Dev, Stage, Production) with automated build delivery to Firebase App Distribution and TestFlight. • Developed a Debug Menu for QA with HTTP request inspection, feature flags, and application configuration. • Integrated analytics, crash reporting frameworks and deep linking • Developed the application's navigation architecture. • Developed a lightweight authentication backend in Go. • Generated Swagger API documentation and Postman collections from the native application codebase using AI agents. • Defined and established the project's Data–Domain–Presentation architecture principles. • Conducted technical interviews and onboarded new developers. • Collaborated with cross-functional teams to drive technical decisions and ensure successful feature delivery.
Technologies:	Flutter, Dart, RxDart, Go, Bloc, Cubit, GoRouter, GetIt, Lottie, Dio, Monorepo(Flutter workspace), Git, Widgetbook, Mocktail, BlocTest, Golden tests, Git, Jira, Cursor, NotebookLM, Pigeon, Fastlane, Wireguard VPN, AppsFlyer, Directus sdk, Firebase: BigQuery, remote config, dynamic links, messaging, analytics

IDT (Warsaw, Poland)

Senior Software Engineer

10.2024 - 01.2026

Project:	<u>BOSS Money Transfer</u> (Finance domain)
Project description:	International money transfer app with 1 million+ downloads. Send money to recipients for cash pick up, mobile wallet credits, bank deposit, home delivery, direct debit, and more to come.
Position:	Senior Software Developer
Responsibilities and achievements:	- Designed and developed modules for country-specific payment methods. - Integrated third-party frameworks to improve user experience and accelerate feature delivery. - Re-architected the HTTP client layer, reducing code duplication, improving separation of concerns, implementing request caching, introducing typed error handling, and achieving comprehensive unit test coverage with request stubbing. - Improved application navigation and routing architecture. - Enhanced application analytics by improving event tracking and data quality. - Participated in architectural discussions and key technical decision-making. - Mentored and onboarded new team members. - Increased test coverage with unit, integration, and Golden tests for critical application features. - Developed a configurable debug menu enabling QA engineers to toggle feature flags, modify application settings, and inspect network traffic. - Integrated crash reporting and performance monitoring solutions, enabling faster detection, prioritization, and resolution of application stability issues. - Developed secure payment and money transfer features in compliance with PCI DSS and OWASP Mobile security best practices. - Developed and maintained project-specific AI agent configurations, custom rules, and reusable skills to automate development workflows and standardize engineering practices.
Technologies:	Flutter, Dart, RxDart, Bloc, Cubit, GetIt, Lottie, Dio, Melos, Git submodules, Widgetbook, Mocktail, BlocTest, Golden tests, Git, Jira, Cursor, Fastlane, Plaid sdk, Braze sdk, Amplitude sdk, AppsFlyer, Kochava, Firebase: BigQuery, remote config, dynamic links, messaging, analytics

Vention (Warsaw, Poland)

Senior Software Engineer/Team Lead

06.2021 - 10.2024

Project:	<u>CHR-Mobile</u> (Medical domain)
Project description:	Mobile application for practitioners within one of Canada's largest healthcare networks. It enables doctors to manage schedules and appointments, access patient records and lab results, conduct virtual visits, manage clinical communications, and securely capture and upload patient photos.
Position:	Team Lead

Responsibilities and achievements:	• Led a team of 4 developers, providing technical leadership, interviews, onboarding, mentoring, and code reviews. • Collaborated with cross-functional teams to drive technical decisions and ensure successful feature delivery. • MVP development and successful delivery of a release version of the product. • Monorepos implementation where multiple projects or modules coexist within a single repository. Thanks to this all code is managed together, allowing for easier code sharing, version control, and dependency management which helps us to have separate packages which can be used in many applications. • Tests implementation and achieve test coverage by 80% for key use-cases including the generation snapshots of the main screens by GoldenTests. • Writing project documentation which describes the main requirements of code reviewing and application functionality depended on enabled features. The client can track availability of each developing feature depending on the build version. • Organizing the knowledge between developers of the team by weekly common technical calls. It helps to reduce code duplication, follow a single code style, and decrease the time of reviewing code. • Continuous integration and deployment pipelines implementation that automate the process of delivering new application builds to the AppStore and PlayStore for testing and publishing the release • Developing the option of debug menu where QA's are able to switch on/off features are in developing, configure application parameters and view network logging • Integration of analytics frameworks and configure environments on the analytics API side that allows the client to better understand their customers and to ensure an excellent user experience. • Integration of crash reporting frameworks that helps track, prioritize, and fix stability issues that reduce application quality. • Supported successful external penetration testing by implementing security requirements in accordance with OWASP Mobile security best practices.
Technologies:	Flutter, Dart, RxDart, GraphQL, Bloc, Cubit, GetIt, Lottie, Dio, WebRTC, Monorepos, Melos, OnePub, Mocktail, BlocTest, Golden tests, Widget tests, Git, Jira, Fastlane, GitHub actions, Firebase: remote config, dynamic links, analytics, Amazon: AWS Amplify

iTextArt (Belarus, Minsk)
Senior Software Engineer

04.2016 - 06.2021

Project:	<u>How's mom</u> (HealthCare domain)
Project description:	Mobile healthcare application that helps families care for elderly relatives by providing access to health data, analytics reports, family chat, and broadcast notifications from healthcare providers.
Position:	Lead Software Developer

Responsibilities and achievements:	- Developed the mobile application from scratch and established architectural patterns adopted across the project. - Designed and implemented a real-time chat using Firebase Firestore, Cloud Messaging, and Cloud Functions to optimize network usage. - Integrated Firebase Analytics and Crashlytics for monitoring application performance and stability. - Increased code quality by covering core business logic with unit tests. - Automated CI/CD for Firebase App Distribution, accelerating QA and release cycles.
Technologies:	Flutter, Dart, RxDart, Firebase/Messaging, Firebase Auth, Firebase Dynamic Links, Bloc, Cubit, Mocktail, BlocTests

Project:	<u>Forex.com</u> (Trading domain)
Project description:	Mobile trading application for the Forex market, enabling users to monitor real-time market data, analyze price movements with advanced charts, manage watchlists and alerts, execute advanced trading orders, and seamlessly synchronize positions with the web trading platform.
Position:	Senior Software Developer / Team Lead
Responsibilities and achievements:	- Led a team of 4 developers, providing technical leadership, mentoring, and code reviews. - Designed and implemented a unified domain-layer interface to integrate a second trading API into the Forex platform. - Delivered a new application design, adapting functionality to support differences between multiple trading APIs while maintaining a consistent user experience. - Collaborated with cross-functional teams to drive technical decisions and ensure successful feature delivery.
Technologies:	Swift, RxSwift, IOS SDK, Objective C, WebSockets, LightStreamer SDK, Git, JIRA, REST API, Push Notifications, MVVM

Project:	<u>Vision Test</u> (Medical domain)
Project description:	Mobile application for a leading U.S. online retailer of prescription glasses and contact lenses. The app enables users to complete a remote vision exam using their smartphone. Eligible users can take an eye test, after which a licensed eye doctor reviews the results and, if appropriate, renews the user's prescription.
Position:	Senior Software Developer
Technologies:	Swift, SwiftUI, IOS SDK, Combine, Redux (Mobius framework), Alamofire, Git, JIRA, REST API, Fastlane, Vision, AVKit, XCTest

Project:	<u>FC Bayern München</u> (Sport domain)
Project description:	Official mobile application for a professional football club, providing fans with the latest news, live match coverage, team statistics, video

	content, push notifications, and seamless access to the club's online store.
Position:	Senior Software Developer
Technologies:	IOS SDK, Swift, PromiseKit, Social Framework, Git, JIRA, XCode, REST API

PROGNOZ (Minsk, Belarus)

Software Engineer

05.2012 - 05.2016

Project:	FieldFocus
Project description:	Mobile application for farmers to digitize their fields and receive information about crop health and weather. Using satellite remote sensing, specific crop and variety information that users sent, the application provides them with a yield analysis and weather information for each field
Position:	Software Developer
Technologies:	Android SDK, Google Maps, Realm, Java, RxJava, Git, Retrofit, REST API

Project:	World Bank EdStats DataFinder
Project description:	Mobile application for the World Bank providing access to national, regional, and global education data. Users can explore and compare indicators by country, topic, or metric, visualize data through charts, tables, and maps, and share insights via email or social media.
Position:	Software Developer
Responsibilities and achievements:	Participating in developing cross-platforms charts by C++ using OpenGL 2.0 which were later used in the Android application version
Technologies:	XML, IOS SDK, CoreGraphics, Social Framework, Sqlite, Objective-C, OpenGL 2.0, C++, Git, JIRA, REST API

EDUCATION:

- Belarusian State University of Informatics and Radio-electronics
Bachelor of Science in Faculty of Computer Systems and Networks
- Belarusian State Pedagogical University

LANGUAGES:

- Belarusian / Russian - Native speaker
- English - Upper-Intermediate (B2)
- Polish - B1
